

## ABSTRACT

Portable electronic equipment capable of changing the display on a display means so that the display has letters of a desired size, by a simple operation. The portable electronic equipment has (a) a display means for displaying information, (b) a first manipulator means for performing a first screen process on the information displayed on the display means, (c) a second manipulator means for performing a second screen process on the information by operation in a circumferential direction thereof, and (d) a controller means. The controller means controls the first manipulator means, the second manipulator means, and the display means. Thereby, the controller can perform the first screen process of scrolling the screen in an arbitrary direction to select a display position and the second screen process of scaling up, scaling down, and switching the screen with the selected display position as a reference.
